DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 19-23, are rejected under 35 U.S.C. 102(e) as being anticipated by Schneider et al. (USPN 6559858 B1), hereinafter simply Schneider.

2. In regard to claim 19, Schneider teaches a method for smoothing a digital ink stroke (anti-aliased lines), see col.1 lines 52-55, comprising the steps of: determining a width of the digital ink stroke at a plurality of sampling locations (connecting pixels by n-pixel wide); and smoothing the width of the digital ink stroke based on the plurality of sampling locations (creating anti-aliased electronic ink images for samples; in computer graphic, anti-aliasing lines corresponding to smoothing lines). See col.3 lines 40-50.

3. In regard to claim 20, Schneider teaches a method for smoothing a digital ink stroke (anti-aliased lines), see col.1 lines 52-55, wherein the step of determining includes determining a plurality of pen tip instances at each sampling location, each pen

tip instance having an associated size, the width at each sampling location depending upon the size of the respective pen tip instance. See col.1 lines 55-67.

4. In regard to claim 21, Schneider teaches a method for smoothing a digital ink stroke (anti-aliased lines), see col.1 lines 52-55, wherein the step of smoothing includes smoothing using a least-squares algorithm. See col.4 lines 44-50.

5. In regard to claim 22, Schneider teaches a method for smoothing a digital ink stroke (anti-aliased lines), see col.1 lines 52-55, comprising the steps of: determining a plurality of pen tip instances of the digital ink stroke, each of the pen tip instances having an associated rotation (pixels forming circle); see col.4 lines 5-10, and smoothing the rotations of the plurality of pen tip instances, see col.3 lines 42-50.

6. In regard to claim 23, Schneider teaches a method for smoothing a digital ink stroke (anti-aliased lines), see col.1 lines 52-55, wherein the step of smoothing includes smoothing using a least-squares algorithm. See col.4 lines 44-50.
